### STUDENT PLEDGE OF ACADEMIC INTEGRITY

As a student of Universiti Teknologi MARA (UiTM), it is my responsibility to act in accordance with UiTM's academic assessment and evaluation policy. I hereby pledge to act and uphold academic integrity and pursue scholarly activities in UiTM with honesty and responsible manner. I will not engage or tolerate acts of academic dishonesty, academic misconduct, or academic fraud including but not limited to:

- a. **Cheating:** Using or attempt to use any unauthorized device, assistance, sources, practice or materials while completing academic assessments. This include but not limited to copying from another, allowing others to copy, unauthorized collaboration on an assignment or open book tests, or engaging in any act or conduct that can be construed as cheating.
- b. **Plagiarism:** Using or attempts to use the work of others (ideas, design, words, art, music, etc.) without acknowledging the source; using or purchasing materials prepared by another person or agency or engaging in other behavior that a reasonable person would consider as plagiarism.
- c. **Fabrication:** Falsifying data, information, or citations in any academic assessment and evaluation.
- d. **Deception:** Providing false information with intend to deceive an instructor concerning any academic assessment and evaluation.
- e. **Furnishing false information:** Providing false information or false representation to any UiTM official, instructor, or office.

With this pledge, I am fully aware that I am obliged to conduct myself with utmost honesty and integrity. I fully understand that a disciplinary action can be taken against me if I, in any manner, violate this pledge.

## **ACKNOWLEDGEMENT**

Assalamulaikum w.b.t

First and foremost, I would like to praise and thank the almighty god for providing me with the strength, time and patience. As a result of his blessing, I was able to completed his assignment flourishingly. Without his blessing, I would not get this far. With all of my full commitment and responsibility, I will produce a good assignment with all of my strength.

Secondly, I would like to express my gratitude to the lecturer that helped me in this assignment, Mr. Airul Shazwan Bin Norshahimi, because this assignment would not have been completed properly without his guidance. He always there to support and guide me on how to complete this assignment with full of patience and clear instruction to produce good results. He was a huge inspiration to me as i worked on this project. I would also like to thank him for teaching me this course.

Last but not lease, I would like to show thanks to my loving family for their encouragement and prayers that have kept me going till now. They have always been there for me, give us a call lending their ears for me to keep me going up. I hope my effort was worth it and will help me to get good grade for my final results. After doing this assignment I have learned new things that I never knew before. May this assignment will provide me something and help me in the future.

## **1.0 INTRODUCTION**

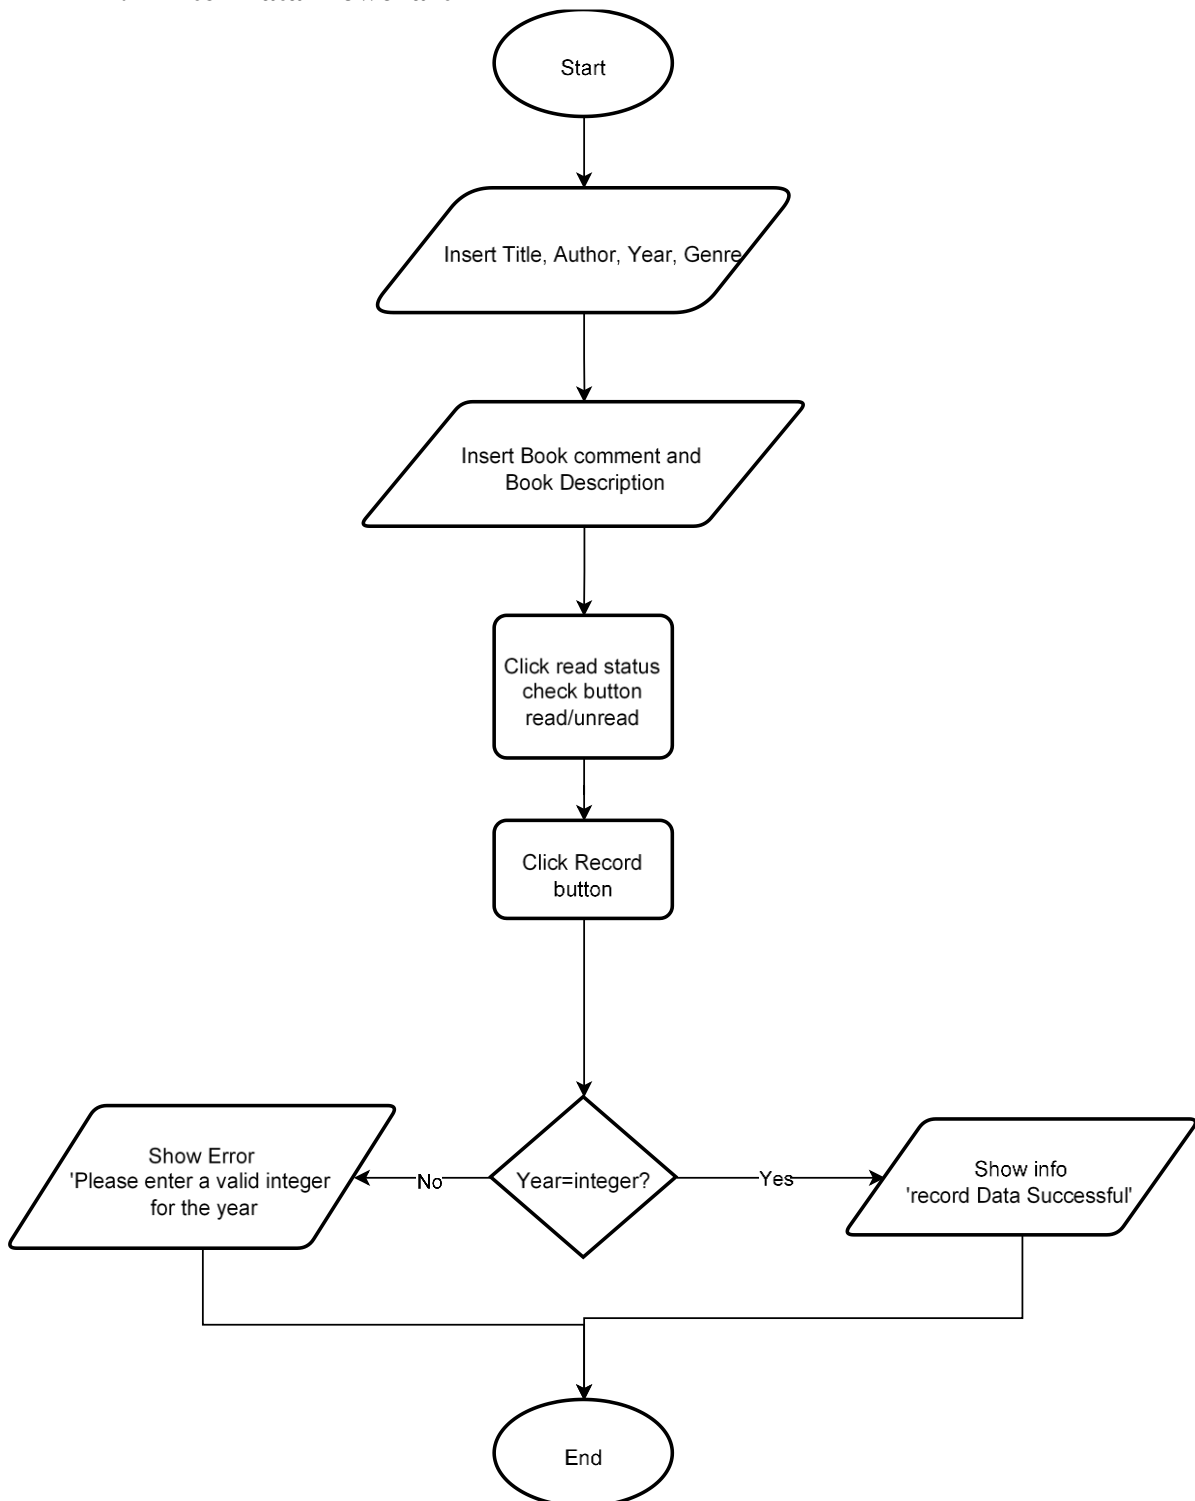

In this individual assignment, the simple computer interface that I choose to make is called 'library personal organizer'. The reason that I choose to make this library organizer is because I'm inspired to do it when I first watch this suggestion in the google, and the reason of that is because I dream that when I have my own house, I would want my personal library so without a doubt that I would need a library organizer for that as I'm library student learned to arrange books systematically and I want to practice that in real life. Basically, the system library organizer will record all your book data to the database so you can keep track on all of your books. Other than that, it will record the information of a person who want to loan it so you would know who loan your books at the moment.

Now, you might wonder what does the data that user might insert into this system to record it in the database, firstly to record your book you need to insert your book title, author, year, then genre after that it optional for you to insert book comment and book description. After that you have to click on read or unread check button and lastly click on 'enter data' button to record your data. After you record your data, you can see your book record on the book list frame below.

Then if there are people want to loan your books, they need to put a simple information to record, such as name, numbers off books that he wants to loan and the books name. after that you have to click 'loan button' to record it and it also will automatically count how much you have to pay based on how many books you loan. However, there are some rules to loan books such as one book equal to RM 0.50, maximum loan at one time only 5, then books must be return after 3 weeks and lastly if the is loss the borrower need to pay full price of the books.

## **6.0 CONCLUSION**

In conclusion, developing the personal library organizer using Python and Tkinter has provided valuable insights into GUI programming and database integration. Through this project, I've gained practical experience in creating an interactive and user-friendly application for organizing and managing personal book collections. I hope to continue refining my skills in software development, exploring more advanced features, and contributing to larger projects in the future. This project has not only enhanced my understanding of Python and Tkinter but also sparked enthusiasm for further learning and application in the field of software development.
